

ACM STUDENT CHAPTER, SRMIST

Prompt Wars: Submission Walkthrough

Official rules, deployment requirements, and AI evaluation criteria for all hackathon participants.

Presented by Nayaj — Webmaster, ACM SRMIST

GETTING READY

Three Core Deliverables

1. GitHub Repo

Public code link ending in .git.

2. Cloud Run App

Live hosted Google Cloud Run URL.

3. LinkedIn Post

Public post explaining problem solution.

REQUIREMENT 01

GitHub Repository Rules

Public Visibility: Accessible to evaluation team.

Link Format: Must explicitly end with .git.

Single Branch: Contains strictly one branch.

Size Cap: Strictly under 10 MB initially.

REQUIRED URL FORMAT

https://github.com/user/project.git

REJECTED FORMAT

https://github.com/user/project

INITIAL CHECKS WARNING

Strict Size & Branch Limits

< 10 MB

Strictly Under 10 MB

Remove heavy datasets or videos.

1 Branch

Single Branch Only

Multiple branches violate submission rules.

REQUIREMENT 02

Final Hosting: Google Cloud Run

Development Freedom

Google AI Studio: Allowed for building.

Vertex AI & Firebase: Allowed for backend.

Antigravity: Allowed during creation.

Final Deployment Rule

Google Cloud Run: Mandatory final host.

No Vercel Links: Strictly rejected.

No Netlify Links: Strictly rejected.

REQUIREMENT 03

Structuring Your LinkedIn Post

STEP 01

The Problem

State the specific challenge tackled.

STEP 02

Your Build

Describe your project and tools.

STEP 03

Solution Fit

Connect solution directly to problem.

REQUIREMENT 04

Submitting on Innovator Dashboard

- **Verify Login:** Use your registered hackathon email address.
- **Field 1 (GitHub):** Paste public repository link ending in .git.
- **Field 2 (Deployed Link):** Enter live Google Cloud Run URL.
- **Field 3 (LinkedIn Post):** Paste published project story link.
- **Confirm Status:** Verify submission is recorded on dashboard.

AI EVALUATION (1 OF 2)

Code & Architecture Parameters

1. Code Quality

Clean readable well-organized structure.

2. Security

Zero exposed keys or credentials.

3. Efficiency

Sensible resource usage without bloat.

AI EVALUATION (2 OF 2)

Reliability & Alignment Parameters

4. Testing

Verified features with unit tests.

5. Accessibility

Readable contrast with keyboard navigation.

6. Problem Alignment

Directly solves assigned challenge statement.

CRITICAL WARNING

Max 2 Attempts: Latest Score Counts

Submission Attempt	AI Score Received	Official Leaderboard Score	Strategic Action
First Attempt	90	90	Review AI feedback carefully
Second Attempt	60	60 (Replaces 90)	Submit only if confident

⚡Real-Time Leaderboard: Your latest submission immediately overwrites your previous score.

FINAL RECAP

Quick Verification Checklist

.git

Public GitHub

1 branch, < 10 MB

Cloud Run

Final Hosting

No Vercel or Netlify

LinkedIn

Solution Story

Tied to problem statement

2 Max

Total Attempts

Latest score counts

NEXT STEP: CHALLENGE REVEAL

Questions Before We Begin?

Log in to your Innovator Dashboard and get ready for the problem statement reveal.

All the best from ACM Student Chapter, SRMIST!
